SUMMARY

Builder who ships production AI inside institutional finance. A CRE underwriter (CLO and large-portfolio specialist) who designed and deployed his group's AI stack from the underwriting seat, with tools running daily across underwriting, credit, asset management, and the executive team.

EXPERIENCE

LendingOne Chicago, IL (Remote)

Senior Underwriter, Institutional Group / Credit Analyst June 2024 – Present

Lead underwriting for CRE loan portfolios of $1MM–$134MM across 5–500 properties; personally underwrote ~$500MM of the group's ~$1B in annual closings (1,500+ properties). Designated underwriter for large transactions, CLO deals, and specialty structures.

AI & Automation Engineering

- Own the Institutional Group's AI and automation roadmap end to end: scope with underwriting, operations, and senior leadership, then architect, deploy, and iterate. A suite of production tools in daily use across underwriting, credit, transaction management, asset management, valuations, and the executive team. Every build ships with regression tests, branch-based development, rollback-ready commits, and separate test and production environments.
- Built full-stack commercial appraisal review application using LLMs and custom AI agents that standardizes review criteria and surfaces red flags; cut turnaround from multiple days to ~40 minutes (20-min AI-assisted review + 20-min sign-off) across ~25 commercial appraisals; the team's standard workflow
- Designed and deployed residential appraisal review pipeline, replacing a third-party SaaS ($3,000+/month + $8/appraisal) and an extraction step (15–20 min/report); cost reduced to <$100/month and $0.02/appraisal, with processing under 1 minute per report
- Built IG QC, the group's quality-control workspace: a deal-grouped review queue over the pipeline, loan and draw checklists with per-user Box document access, and a private worker for checks and evidence, with final signoff kept human by design
- Architected a centralized PostgreSQL database with vector embeddings and a custom MCP server, the shared data layer that gives LLM agents access to loan, property, appraisal, pipeline, and due diligence data
- Automated servicer data ingestion: a daily scheduled agent detects updated multi-thousand-row servicer reports in Google Drive through an MCP connector, parses them, and writes them to the database
- Built the executive exposure and delinquency dashboard, combining 4 servicer reports, a CRM export, and an investor report in one view; adopted as the source of truth for monthly C-Suite meetings
- Built and deployed a proprietary CRM used by 20 people, replacing an enterprise Monday.com subscription (30+ seats) and hourly outside-consultant fees
- Built a suite of Google Apps Script automations, including a Sheets-based loan operations system that parses SharePoint files and automates email follow-up, and runs task management and loan exposure tracking

Credit & Underwriting

- Conduct full credit analysis (credit, valuation, legal, and property risk; NCF pro formas; DSCR/DY) across 30-year rental, 5/7/10-year balloon, bridge, BTR bridge aggregation, bridge-to-perm, new construction and builder finance, and CLO executions
- Build underwriting models; quote deals, structure terms, and draft term sheets; develop credit guidelines; produce deal-specific credit memos submitted to BX for approval
- Identify fraud and inconsistencies across borrower narratives, documentation, title, and third-party reports; build justified exception support within credit policy
- Train and mentor new underwriters, standardizing processes for efficiency, accuracy, and repeatability

Grove Bank & Trust Miami, FL

Senior Corporate Banking Analyst January 2024 – February 2024

- Prepared underwriting memos for participations in syndicated corporate debt and loan acquisitions

Wells Fargo Fort Lauderdale, FL
Commercial Banking Portfolio Program Analyst July 2022 – December 2023

- 2022 Financial Analyst Cohort; completed 6 months of formal credit training in Charlotte (policy, underwriting, financial analysis, credit facilities)
- Underwrote $2B+ in direct and operating exposure to public and private companies with $100MM+ in annual revenue
- Wrote underwriting memos and annual reviews assessing balance sheet ratios, repayment sources, cash flow, and debt service capacity

Institute of Jewish Knowledge and Learning Virtual
IT/Finance Intern May 2020 – January 2021

PROJECTS

Pastefront | *pastefront.com* | *Founder & Builder* October 2026 – Present

- Live AI storefront builder: paste a CJ Dropshipping, AliExpress, or Printify link and Claude generates the branded store, product copy, target-margin pricing, and accessory suggestions
- Built the commerce stack: Stripe Connect checkout, automatic supplier ordering with tracking, restricted-product safety checks, and an owner dashboard (chat edits, offers, A/B tests, analytics)

Roomy | *Space planner* | *Founder & Builder* October 2026 – Present

- Built a space planning app (TypeScript): draw floor plans with walls and doors, shop for furniture in context, and share plans as images; backup and restore and undo built in

TAP Marine*, Fort Lauderdale, FL* | *AI Systems Builder* July 2024 – Present

- Built a local-first proposal database and builder: a self-maintaining vectorized database over all company files with an AI agent Q&A interface, running entirely on a local model; no data leaves the premises
- Building TAP-EI, the company's multi-tenant engineering portal (Next.js, Supabase/Postgres with row-level security, Python worker): source-cited search and AI answers over vessel documents, field capture, service reports, and CRM modules (work orders, quoting, invoicing)

AgentDesk | *github.com/evanshattenkirk/Trading-Agent* September 2026 – Present

- Built a multi-strategy trading engine on Robinhood's Agentic Trading MCP, running strategy books across SPY options, single-name options, and US equities: a deterministic Python core, with Claude agents as advisory desks; runs backtest, paper, and live modes
- Pre-registered strategy rules before testing, with in-sample/out-of-sample splits and re-runs at taker fills; most candidates fail and are documented. Every book, including a 0DTE SPY iron fly, trades paper only; live capital requires 20+ paper sessions, 100+ trades, and PF ≥ 1.1 at taker fills, then a 1-week shadow run

EDUCATION

University of Florida, Warrington College of Business Gainesville, FL
B.S. Business Administration, Finance; Minor in Real Estate Finance; GPA 3.54 May 2022

- Gator Student Investment Fund, Energy Analyst: co-managed a ~$500K equity portfolio; built DCF and comps-based pitches

SKILLS & ADDITIONAL

- **Engineering:** Python, TypeScript, SQL (PostgreSQL), React, FastAPI, MongoDB, Snowflake, Supabase, Google Apps Script, Excel VBA, HTML; C++/C#, Java
- **AI & Automation:** LLM agents, MCP servers, RAG pipelines, document extraction, workflow automation; Claude, Codex, and Cursor used daily
- **Finance:** CRE and corporate credit underwriting, financial modeling, DSCR/DY analysis, CLO execution, portfolio management, loan servicing, Bloomberg
- **Other:** Six-figure personal portfolio; taxable brokerage has beaten the S&P 500 since 2019 (9.21x MOIC, 43.86% XIRR)
